

Topics In Astrology

Topics In Astrology is a series of talks to introduce the astrological elements: the signs, the houses, the planets and the aspects. It is designed for people with pedestrian interest in astrology and for people who want a foundation in basics before embarking on a more technical study. The talks are intended as much for entertainment as for education. Each of the elements is spoken of from various points of view such as mythology, psychology, science, art, and mysticism. Talks #2 and #3 are for learning how to cast a horoscope and can be skipped without missing much general information. Students are invited to see astrology through everyday life and examples are presented to encourage that. More than a thousand students have attended these talks in various versions. There have been more than twenty different versions. This version is the most recent but it may not be the best. Please enjoy them.
